## Operation on Mac OS X

## **System Requirements for the Printer Driver**

Before installing the printer driver, make sure that your system meets the following system requirements.

Computer	Apple Macintosh computer with a PowerPC G3 or later processor (PowerPC G4 or later is recommended)
Connecting the computer and printer	USB connection, Network connection (10Base-T/100Base-TX)
Operating system	Mac OS X v10.2 or later
RAM	More than OS recommendation
Available disk space	256 MB or more (for storing images)

## Installing the Printer Driver

You must have administrator privileges in order to install the printer driver.

Before proceeding with the installation, be sure to exit all running applications.

## Installing Ghostscript

You need to install Ghostscript before installing the printer driver. The following procedure is not required with Mac OS X 10.3 or later.

1 The latest version of Ghostscript can be downloaded from <a href="http://">http://</a> www.cups.org/ghostscript.php>.

Here we explain how to install the software from the espgs-7.05.5-0.ppc.dmg disk image file.

- 2 Double click the espgs-7.05.5-0.ppc.dmg file. The disk image Install ESP Ghostscript 7.05.5 appears on the desktop.
- 3 Double click the **ESP Ghostscript.mpkg** package file in the disk image.
- 4 Enter the administrator user name and password in the Authenticate dialog box, and then click OK.

## Installing the magicolor 5430 DL Printer Driver

The procedure for installing the printer driver on Mac OS 10.2.x is described below. The following procedure or some steps may be different depending on the version of the operating system being used. Complete the installation according to the instructions in the dialog boxes that appear.

- 1 Insert the magicolor 5430 DL Utilities & Documentation CD-ROM in the CD-R/DVD drive of your Macintosh.
- 2 Double click the magicolor5430DL-x.x.x-ppc.dmg disk image file.

The disk image KONICA MINOLTA magicolor 5430 DL appears on the desktop.

3 Double-click the magicolor5430DL.pkg package file in the disk image.

The installer for the printer driver starts up.

4 Enter the administrator user name and password in the Authenticate dialog box, and then click OK.

## 5 Click Continue.

 This displays help information about the Print dialog box.

- Preview Click this button to view a preview image of the printout, to check that the print options are set correctly.
- Save As PDF... Click this button to save the print output as a PDF file.
- Cancel

Click this button to close the Print dialog box without applying any of the settings.

Print

Click this button to print using the selected print options.

# **Copies & Pages**

The **Copies & Pages** section is used to specify the number of copies to print and the range of pages to print.

Printer: KONICA MINOLTA magicolor 5430 DL
Presets: Standard
Copies & Pages
Copies: 1 Collated Pages: All From: 1 to: 1
(? (Preview) (Save As PDF) (Cancel (Print)

Copies

This specifies the number of copies to be printed. If the **Collated** checkbox is selected, all pages in the documents are printed as sets of printouts.

For example, if 5 is entered for **Copies** and **Collated** is selected, the document is printed five times from the first page to the last page.

Pages

All: Prints all pages in the document.

From, to: Specifies the range of pages to be printed.

## Layout

The **Layout** section is used to specify the number of pages per sheet of paper and other layout options when printing.

	Printer: KONICA MINOLTA magicolor 5430 DL
	Pages per Sheet: 1 Layout Direction: 2 5 0 Border: None
?	Preview Save As PDF Cancel Print

Pages per Sheet

Specifies the number of pages to be printed on one sheet of paper. For example, if **2** is selected, two pages are printed on one sheet of paper.

Layout Direction

If you are printing more than one page per sheet, this specifies the direction and order the pages should be arranged on each sheet of paper.

Border

This prints a border around the image for each of the pages printed on one sheet of paper when more than one page is printed on one sheet of paper.

# **Duplex**

The **Duplex** section is used to specify the options for printing on both sides of the paper when the Duplex Unit is installed in the printer.

Printer: KONICA MINOLTA magicolor 5430 DL
Duplex
Print on Both Sides Binding:
? (Preview) (Save As PDF) (Cancel (Print)

### Print on Both Sides

Select this option to print on both sides of the paper.

Binding

This is used to specify if the binding edge should be along the long edge or the short edge of the paper.

To print on both sides of the paper, **Duplex Unit** must be selected under Installable Options (p. 22).

The **Print on Both Sides** check box can be selected even when the Duplex Unit is not installed. However, in this case, the print job will be cancelled.

# **Output Options**

The **Output Options** section is used to specify whether or not to save the print output as a file, and the data format to use when saving the data.

Printer: KONICA MINOLTA magicolor 5430 DL	
Presets: Standard	
Output Options	-
Save as File Format VPDF	_
? (Preview) Save As PDF) (Cancel) Save	)

Save as File

Select this option to save the print output as a file.

Format

Select the data format to be used when saving the print output as a file.

## Paper Feed

The Paper Feed section is used to specify the paper feed setting.

(? (Preview) (Save As PDF) (Cancel (Print)			

All pages from

All pages in the document are printed using the paper in the specified paper tray.

### First page from

The first page of the document is printed on paper from a paper tray different from the tray used to print the rest of the document.

### Remaining from

The rest of the document is printed from the specified paper tray when the first page is to be printed on paper from a different tray.

If the optional trays is installed, select **Tray 2 & Tray 3** under **Install**able Options (p. 22). If Tray 2 & Tray 3 is not selected, Tray 2 and Tray 3 appears in gray and cannot be selected.

## **Printer Features**

The **Printer Features** section is used to specify the resolution, paper type, color options, watermark options etc., for the **Basic Features**, **Color Matching Options**, **Watermark Orientation**, **Watermark Selection**, and **Watermark Setting** feature sets.

Presets: Standard Printer Features	•
Feature Sets: Resolution: 1200x6 Media Type: Plain P Color Mode: CMYK Color	
	Cancel Print

Printer: KONICA MINOLTA magicolor 5430 DL
Presets: Standard
Printer Features
Feature Sets: Basic Features
Resolution: 1200x600 DPI

# **Checking Print Jobs**

You can check the status of print jobs in **Print Center**.

1 Open **Print Center**, which can be accessed by clicking Macintosh HD, then **Applications**, then **Utilities**.

2 Double-click this printer in the **Printer List**. Any unfinished print jobs are displayed.

00	0	KONICA	MINOLTA	nagicol	or 5430	DL	0
<b>O</b> elete	Hold	Resume	Stop Jobs				
		Untitled					
		Printing p	age 1, 80%	comple	ete		
Status		Name					
Printing		Untitled					
							1

# **Deleting a Print Job**

- 1 Display the print jobs using the procedure above.
- 2 Select the print job you wish to delete.
- 3 Click Delete.

Or, you can also select **Delete Job** from the **Job** menu to delete the job.

# Troubleshooting

Symptom	Solution
The setting in the saved presets are not applied.	Depending on the functions selected for the printer, some preset settings are not saved.
Media type error appears.	If a media type, such as "Transparency", is specified for Tray 2/3, a media type error appears and the printer stops. Be sure to specify a media type supported by Tray 2/3.
The printer stops respond- ing.	Depending on the operating system, some paper size and paper type combinations are not permitted. If the job was sent with an incorrect combination of settings, the printer stops responding. Be sure to print with the correct combination of paper size and paper type settings.
The printer is not detected using Rendezvous.	Using Administrator mode in PageScope Web Connection, select the <b>Enable Rendez-</b> vous Service Discovery check box on the <b>Rendezvous Configuration</b> page.
Checking the version num- ber of the printer driver.	Click the <b>magicolor5430DL.pkg</b> icon in the <b>Receipts</b> folder (within <b>Library</b> ), and then select <b>Get Info</b> from the File menu.
The dialog box may appear unusual when selecting other manufacturer printer and back to magicolor.	Close the Print dialog box, and then open it again.
The custom paper size is different from the size that was set.	Depending on the operating system, the cus- tom paper size settings may change slightly (for example, 5.80" may change to 5.79").
When printing 2 pages on a single sheet of paper, the pages are not centered on the paper.	Depending on the operating system, the pages are not centered on the paper when printing two pages on a single sheet of paper with the following paper sizes.
	Legal, Letter Plus, Foolscap, Government Legal, Statement, Folio

Symptom	Solution
When printing multiple cop- ies of multiple pages on a single sheet of paper with <b>Collated</b> selected, the pages are printed continu- ously.	When printing multiple copies of multiple pages on a single sheet of paper, <b>Collated</b> cannot be selected.
While printing from Acrobat Reader, the pages are not correctly collated or the print job is cancelled.	If a printing error occurs with Acrobat Reader, print using the preview feature provided by the operating system.

# Understanding the Network Configuration Menus

# **Network Menu**

# Location within the Configuration Menu

# Accessing the Network Menu

Use the following series of keystrokes at the printer to access the Network menu options on your printer. This menu provides access to all of the configurable network items.

Press this key	(until) the message window reads
	READY
Menu Select <b>↓</b>	SPECIAL PAGES
	MENU NETWORK
Menu Select ↓	

## **Using the Network Menu Options**

If the printer is connected to a network, the following settings should be specified. For details about each setting, contact your network administrator.

When manually setting the IP address, Subnet Mask, and Gateway turn off DHCP and BOOTP first.

### DHCP/BOOTP

Purpose	If there is a DHCP or BOOTP server on the network, speci- fies whether the IP address is automatically assigned by the DHCP or BOOTP server and other network information is loaded.
Options	DHCP SET: ON BOOTP SET: OFF
	DHCP SET: OFF BOOTP SET: ON
	DHCP SET: OFF BOOTP SET: OFF
Default	DHCP SET: ON, BOOTP SET: OFF

## **IP Address**

Purpose	Sets the IP address of this printer on the network.
Range	0–255 for each xxx triplet
	Use the Up and Down keys to increase or decrease each number; use the Left and Right keys to move between triplets.
Default	192.168.1.2
Notes	Leading zeros of each triplet are automatically suppressed; for example, "001" displays as "1"

### Subnet Mask

Purpose	Sets the subnet mask value of the network. The subnet mask allows you to limit access to your printer (for exam- ple, according to departmental divisions).
Range	0–255 for each xxx triplet Use the Up and Down keys to increase or decrease each number; use the Left and Right keys to move between trip- lets.
Default	255.255.255.0
Notes	Leading zeros of each triplet are automatically suppressed; for example, "000" displays as "0"

### Gateway

Purpose	Sets the address of the router/gateway if a router/gateway is used on your network and you allow users outside your network environment to print on your printer.
Range	0–255 for each xxx triplet Use the Up and Down keys to increase or decrease each number; use the Left and Right keys to move between trip- lets.
Default	192.168.1.1
Notes	Leading zeros of each triplet are automatically suppressed; for example, "001" displays as "1"

### Mac Address

Purpose	Displays the Ethernet hardware address for this printer. It cannot be changed.
Options	None
Default	Printer dependent

### HTTP

Purpose	Enables or disables the printer's internal web page (see chapter 4, "Using PageScope Web Connection.")
Options	HTTP SET: OFF, HTTP SET: ON
Default	HTTP SET: ON
Notes	In order for these settings to be applied, the printer must be turned off, then on again after the setting is specified.

### SNMP

Purpose	Enables or disables SNMP (Simple Network Management Protocol), a scalable, distributed management suite for managing small to large size networks.
Options	SNMP SET: OFF, SNMP SET: ON
Default	SNMP SET: ON
Notes	In order for these settings to be applied, the printer must be turned off, then on again after the setting is specified.

# Network Printing in a Windows Environment

# **Network Connection**

# Theory

To connect your printer in a TCP/IP network environment, you must make sure that the internal network addresses in the printer have been set.

In many cases, you have to enter only a unique IP address. However, you may also have to enter a subnet mask and/or a gateway (router) address, depending on your network configuration requirements.

### **Supported Environments**

Windows Server 2003/XP/2000/NT4.0/Me/98SE

### Ethernet Interface

The standard Ethernet interface is an RJ45 type of connector, capable of transmission speeds from 10 to 100 megabits per second (Mbit/s).

When connecting your printer to an Ethernet network, the tasks you perform depend on how you plan to set the printer's IP (Internet Protocol) address. Printers are shipped with a preset IP address, subnet mask, and gateway.

- IP Address—A unique identifier for each device on a TCP/IP network.
- **Subnet Mask**—A filter used to determine what subnet an IP address belongs to.
- **Gateway**—A node on a network that serves as an entrance to another network.

Since the IP address for each PC and printer on your network must be unique, you usually need to modify this preset address so it doesn't conflict with any other IP address or your network or any attached network. You can do this in one of two ways. Each is explained in detail in the following sections.

- Using DHCP
- Setting the address manually

# Using DHCP

If your network supports DHCP (Dynamic Host Configuration Protocol), the printer's IP address will be automatically assigned by the DHCP server when you turn on the printer. (Refer to "Network Printing" on page 59 for a description of DHCP.)

If your printer is not automatically assigned an IP address, verify that DHCP is enabled on the printer (SPECIAL PAGES/PRINT CON-FIG PAGE). If it is not enabled, you can enable it in the NETWORK DHCP/BOOTP menu.

1 Connect your printer to the network.

Attach your printer to the network by plugging the network RJ45 connector into the RJ45 receptacle on the interface panel of your printer.

- 2 Turn on your PC and printer.
- 3 When the printer's message window displays READY, install the printer driver and utilities.

### Setting the Address Manually

You may also manually change the printer's IP address, subnet mask, and gateway by using the following instructions. (See chapter 2, "Understanding the Network Configuration Menus," for more information.)

When manually setting the IP address, turn off DHCP and BOOTP first.

CAUTION

You should always notify your network's administrator before changing the printer's IP address.

1 Turn on your PC and printer.

2 When the printer's message window displays READY, set the IP address.

Press this key	(until) the message window displays		
	READY		
Menu MENU Select special pages

Menu Select ↓	PRINT CONFIG PAGE
Menu Select ↓	

7 When the printer's message window displays READY, install the printer driver and utilities.

# **Network Printing**

The magicolor 5430 DL supports the following network protocols:

- BOOTP
- DHCP
- HTTP
- IPP
- LPD/LPR
- SLP
- SNMP
- TCP/IP

This chapter defines each of these protocols and then explains how to print via IPP.

### BOOTP

BOOTP (Bootstrap Protocol), an Internet protocol that enables a diskless workstation to discover its own IP address, the IP address of a BOOTP server on the network, and a file to be loaded into memory to boot the machine. This enables the workstation to boot without requiring a hard or floppy disk drive.

## DHCP

DHCP (Dynamic Host Configuration Protocol) is a protocol for assigning dynamic IP addresses to devices on a network. With dynamic addressing, a device can have a different IP address every time it connects to the network. In some systems, the device's IP address can even change while it is still connected. DHCP also supports a mix of static and dynamic IP addresses. Dynamic addressing simplifies network administration because the software keeps track of IP addresses rather than requiring an administrator to manage the task. This means that a new computer can be added to a network without the hassle of manually assigning it a unique IP address.

### HTTP

HTTP (HyperText Transfer Protocol) is the underlying protocol used by the World Wide Web. It defines how messages are formatted and transmitted, and what actions web servers and browsers should take in response to various commands. For example, when you enter a URL in your browser, this actually sends an HTTP command to the Web server directing it to fetch and transmit the requested web page.

## IPP

IPP (Internet Printing Protocol) is a protocol for end users' most common printing situations over the Internet. It allows users to find out about a printer's capabilities, submit print jobs to a printer, find out the status of the printer or print job, and cancel a previously submitted print job.

For more information on using IPP, See "Printing via IPP (Internet Printing Protocol) – Windows Server 2003/XP/2000" on page 62.

## LPD/LPR

LPD/LPR (Line Printer Daemon/Line Printer Request) is a platformindependent printing protocol that runs over TCP/IP. Originally implemented for BSD UNIX, its use has spread into the desktop world and is now an industry standard.

### SLP

SLP (Service Location Protocol) simplifies the discovery and use of network resources such as printers by automating a number of network services.

Traditionally, in order to locate services on the network, users had to supply the host name or network address of the machine providing the desired service. This has created many administrative problems.

However, SLP (Service Location Protocol) simplifies the discovery and use of network resources such as printers by automating a number of network services. It provides a framework that allows networking applications to discover the existence, location, and configuration of networked services.

With SLP users no longer need to know the names of network hosts. Instead, they need to know only the description of the service they are interested in. Based on this description, SLP is able to return the URL of the desired service.

### Unicast, Multicast, and Broadcast

SLP is a unicast and a multicast protocol. This means that messages can be sent to one agent at a time (unicast) or to all agents (that are listening) at the same time (multicast). However, a multicast is not a broadcast. In theory, broadcast messages are "heard" by every node on the network. Multicast differs from broadcast because multicast messages are only "heard" by the nodes on the network that have "joined the multicast group."

For obvious reasons network routers filter almost all broadcast traffic. This means that broadcasts that are generated on one subnet will not be "routed" or forwarded to any of the other subnets connected to the router (from the router's perspective, a subnet is all machines connected to one of its ports).

Multicasts, on the other hand, are forwarded by routers. Multicast traffic from a given group is forwarded by routers to all subnets that have at least one machine that is interested in receiving the multicast for that group.

### SNMP

SNMP (Simple Network Management Protocol) is actually a set of protocols for managing complex networks. SNMP works by sending messages to different parts of a network. SNMP-compliant devices, called agents, store data about themselves in Management Information Bases (MIBs) and return this data to the SNMP requesters.

## TCP/IP

Most networks combine TCP (Transmission Control Protocol) with the lower-level protocol IP (Internet Protocol). TCP establishes a virtual connection between two host systems and guarantees the delivery of data between them while IP specifies the format and addressing of this data sent between these two host systems.

### Printing via IPP (Internet Printing Protocol) – Windows Server 2003/XP/2000

## Adding an IPP Port

There are two ways to add an IPP port under Windows Server 2003/XP/2000: Using setup.exe or using the Add Printer wizard.

### Using setup.exe

Double-click setup.exe in the drivers\english\W2k-xp folder on the Utilities and Documentation CD-ROM. (Unless otherwise noted, all dialog boxes pictured here are taken from a Windows XP operating system.)

In the second dialog box select the Net-
work Printer radio button and then
choose OK.

🖇 magicolor 5430 DL 🛛 🔀		
Please select Local Printer or Network Printer		
C Local Printer		
Network Printee		
OK Cancel Help		

2 In the Printer text box of the next dialog box enter the printer's network pathname in one of the following formats and then choose **OK**:

- http://ipaddress:80/ipp
- http://ipaddress:631/ipp
- ipp://ipaddress:80/ipp
- ipp://ipaddress:631/ipp

If you enter an invalid pathname, the following error message displays (depending on your Windows operating system). Choose **OK** to return to the previous dialog box and then type a valid pathname.

- Windows Server 2003/XP—"Windows cannot connect to the printer. Either the printer name was typed incorrectly, or the specified printer has lost its connection to the server. For more information, click Help."
- Windows 2000—"Could not connect to the printer. You either entered a printer name that was incorrect or the specified printer is no longer connected to the server. Click Help for more information."

# Network Printing

### Printing via IPP (Internet Printing Protocol) – Windows Me/98SE

To print via IPP under Windows Me/98SE, you must first do the following:

- 1 Go to http://www.microsoft.com/Windows98/downloads/contents/WUPreviews/IPP/Default.asp and follow the instructions to download WPN-PINS.EXE, the Internet Print Services update file for Windows 98SE.
- 2 Install the WPNPINS.EXE file by locating it in Windows Explorer and then double-clicking the WPNPINS.EXE.

## Adding an IPP port

There are three ways to add an IPP port under Windows Me/98SE: Using setup.exe, using the Add Printer Wizard (without a printer driver already installed), and using the Add Port (with a printer driver already installed).

### Using setup.exe

Double-click setup.exe in the drivers\english\Win9x folder on the Utilities and Documentation CD-ROM. (Unless otherwise noted, all dialog boxes pictured here are taken from a Windows Me operating system.)

1 In the second dialog box select the **Network Printer** radio button and then choose **OK**.

2	In the Network Path text box in the
	next dialog box enter the printer's net-
	work pathname in one of the following
	formats and then choose OK:

- http://ipaddress:80/ipp
- http://ipaddress:631/ipp
- ipp://ipaddress:80/ipp
- ipp://ipaddress:631/ipp

	< Back Next> Cancel

4 Finish installing the printer. The IPP port will be the default printer port.

### Printing via IPP if the Printer Driver is Already Installed

Choose **Start>Settings>Printers**. (Unless otherwise noted, all dialog boxes pictured here are taken from a Windows Me operating system.)

1 Right-click the printer icon and then choose **Properties** from the pop-up menu.

2 On the Details tab, choose Add Port.

- 3 In the next dialog box, select the **Network** radio button, enter the printer's network pathname in one of the following formats, and then choose **OK** to add the path:
  - http://ipaddress:80/ipp
  - http://ipaddress:631/ipp
  - ipp://ipaddress:80/ipp
  - ipp://ipaddress:631/ipp

4 In the Properties dialog box choose **OK** to enable the IPP port.

# Using PageScope Web Connection

4

# About PageScope Web Connection

This chapter provides information on PageScope Web Connection, an HTTP (HyperText Transfer Protocol)-based web page that resides in your printer and that you can access using your Web browser.

This page gives you instant access to printer status and the most frequently used printer configuration options. Anyone on your network can access the printer using their web browser software. In addition. with the proper password, you can

change the configuration of the printer without leaving your PC.

Users who are not given passwords by the administrator can still view the configuration settings and options but are not able to save or apply changes.

# **Display Language**

The language used in the PageScope Web Connection screens is specified from the printer's control panel. For details on specifying the display language, refer to the User's Guide (CD-ROM) provided with the printer.

## Requirements

To use PageScope Web Connection, the following is required:

- Windows Server 2003/XP/2000/Me/98SE/NT4.0. MacOS X
- Microsoft Internet Explorer version 5.5 or later Netscape Navigator version 7.1 or later Safari version 1.0 or later

You do not need an Internet connection.

- TCP/IP communication software (used by PageScope Web Connection) installed on your PC
- A network, to which both your PC and the printer are connected

You cannot access PageScope Web Connection using a local (USB) connection. If your PC and printer are connected via a USB cable, use the Status Display.

# Setting Up the Printer Web Page

Setting up the printer web page to run on your network involves two basic steps:

- Determining the name or address of your printer
- Setting up the "no proxy" preferences in your browser software

### **Determining the Printer Name**

The printer web page can be accessed in two ways:

Through the assigned name of the printer—This name comes from the IP host table (the filename is **hosts**) on the computer system and is usually assigned by the system administrator (for example, magicolor 5430 DL). It may be more convenient for you to use the printer name than the IP address.

#### Location of the Host Table on the PC

- Windows Server 2003/XP \windows\system32\drivers\etc\hosts
- Windows Me/98SE
- Windows 2000/NT4.0 \winnt\system32\drivers\etc\hosts

\windows\hosts

Through the printer's IP address—The IP address of your printer is a unique number and, therefore, may be the preferred identification to enter, especially if you have more printers active in your network. The printer's IP address is listed on the configuration page.

#### Location of the Configuration Page in the Printer's Configuration Menu

• SPECIAL PAGES/PRINT CONFIG PAGE menu

## Setting Up Your Browser Software

Since your printer resides on your intranet and is not accessible beyond the firewall of your network, you must set up the proper "preferences" in your browser software. Your printer name or IP address must be added to the "no proxy" list in the preferences dialog box of the browser.

You need to do this procedure only once.

The sample screens below may be different from yours depending on software versions and operating systems in use.

Our examples represent the IP address of the printer with: xxx.xxx.xxx.xxx. Always enter your printer's IP address without leading zeros. For example, 192.168.001.002 should be entered as 192.168.1.2.

# Internet Explorer (version 6.0 for Windows)

2 From the **Tools** menu Servers Proxy address to use Туре Port choose Internet Options. 30 HTTP: 0000 3 Select the Connections tab 000.00.000.000 Secure: 000.000.000 0000 on the dialog box. ETP: 0000 4 Choose the LAN Settings Gopher: button to display the Local Socks: Area Network (LAN) Set-Use the same proxy server for all protocols tings dialog box. 5 Select Advanced in Proxy Exceptions Do not use proxy server for addresses beginning with: server to open the Proxy Set-XXX XX XXX XXX \* tings dialog box. -6 In the Exceptions text box, Use semicolons ( ; ) to separate entries. type a comma after the last 0K Cancel entry and then type the printer name or the IP address of your printer. 7 Choose **OK** three times to return to the main browser window. 8 Enter the printer's IP address in the URL Address box to access the

Proxy Settings

? ×

printer home page.

Address 🛃 http://192.168.1.2/

Start Internet Explorer.

1

## Netscape Navigator (version 7.1)

6 Choose **OK** to return to the main browser window.

•

# 7 Enter the printer name or IP address in the URL Location box to access the printer home page.

•

📗 🌿 Bookmarks 🧔 Location: http://192.168.1.2/

# Safari (version 1.1)

- 1 From the Apple menu, choose Location, and then click Network preferences.
- 2 Click the **Proxies** tab in the Network preferences dialog box.
- 3 In the Bypass proxy settings for these Hosts & Domains list, type in the name or IP address of the printer.
- 4 Click Apply Now.
- 5 In the URL address bar, type in the name or IP address of the printer to access the printer's Web page.

# Understanding the PageScope Web **Connection Window**

The illustration below identifies the navigation and configuration areas of the windows that you see in PageScope Web Connection windows.

Link to KONICA MINOLTA web site	Current status Links to main Printer name topics
Version information Access to Administrator Mode	The Low Year To a low Part Set Set Set Set Set Set Set Set Set Se
Links to subtopics	Potenia           Constar           Online Auditase           Patter Menocy:         2048yte           Dibb.t         048yte           Merenic III Dibber TX           Tay 2:         bandad           Dapier Unit:         handad           Dapier Unit:         handad
	Configuration area

# **Navigation**

Selecting the main topic and subtopic displays the configuration area for the printer options (parameters) associated with your selections.

To change a current setting, click on the current setting and then select from the available choices or enter the new value.

In order to apply or save any changes made to the configuration settings, PageScope Web Connection must be logged in from Administrator Mode. (For details, refer to "Administrator Mode" on page 75.)

# **Current Status**

The current status of the printer is displayed at the top of all PageScope Web Connection windows. The icon displays the type of status being displayed.

lcon	Status	Description	Examples
۲	Ready	The printer is online and either ready to print or printing.	READY WARMING UP PRINTING
<u>\</u>	Attention	The printer needs attention, but printing continues.	TRAY 1 EMPTY C TONER LOW
8	Fixable Error	The printer needs attention before printing can resume.	PUT MEDIA:TRAY 1 TONER EMPTY CYAN MEDIA JAM TRAY 2
۲	Fatal Error	The printer must be rebooted. If that doesn't fix the error, service is required.	ERROR AIDC SENSOR

### **User Mode**

You automatically enter User Mode whenever you enter PageScope Web Connection. In User Mode you can view configuration settings but not change them.

# Administrator Mode

In order to change any configuration settings through PageScope Web Connection, you must first enter Administrator Mode:

- 1 Choose the Login button.
- 2 Type the password in the Admin Password text box.

The default password is "administrator". However, once you are in Administrator Mode, you can change this in the System/Password window.

3 Choose the Login button.

If you type an incorrect password, the following message displays: "Invalid Password. Please log in again with a correct password." Retype the password.

# **Viewing Printer Status**

# System Page

The System page is the starting point for all access to the printer's internal web pages. On this page you find printer status and current configuration settings, printer identification, and links to all other web pages.

# Summary (shown above)

Item	Description
Printer name/status	Shows the name assigned to your printer, and dis- plays the current status of the printer—just as it's displayed on the printer's control panel message window.
	The status display allows you to remotely identify possible printer problems, such as out of paper and out of toner.
Device Status (Product image)	Identifies the type of printer that you are browsing. The printer is pictured in the illustration with all installed options.
Printer Memory	Displays the amount of memory installed in the printer.
DIMM	If an optional DIMM is installed in the printer, dis- plays the size of the DIMM.
	If no optional DIMM is installed in the printer, dis- plays 0 MBytes.
Network	Lists the installed printer interface (Ethernet 10/ 100Base TX).
Tray 2	Identifies whether an optional lower feeder unit (Tray 2) is "Installed" or "Not Installed."
Tray 3	Identifies whether an optional lower feeder unit (Tray 3) is "Installed" or "Not Installed".
Duplex Unit	Identifies whether the duplex unit is "Installed" or "Not Installed."

#### User Choice (shown above)

The **System/User Choice** window allows you to configure the following items:

Item	Description
AutoContinue	Specifies whether the printer should continue printing if the correct media size is not loaded in the specified tray.
	Choices: Off, On Default: On
	Configuration Menu Equivalent: ENGINE/AUTO CONTINUE

Item	Description
Tray Chaining	Specifies whether the printer should switch to a different tray (containing media of the same size and type of media) and then continue printing if the specified tray runs out of media.
	Choices: Off, On Default: On
	Configuration Menu Equivalent: ENGINE/TRAY CHAINING
	This option is available only if the optional lower feeder unit (Tray 2/3) is installed.
Energy Saver	Sets the amount of time (in minutes) the printer waits between print jobs before activating the Energy Saver feature.
	Choices: 15, 30, 60, 120 Default: 30
	Configuration Menu Equivalent: ENGINE/ENERGY SAVER
	When the Energy Saver setting in the Preference is off, the drop-down list box is disabled and gray out.
Restore User Default button	Resets all Administrator Mode configuration settings to their factory defaults.
	Configuration Menu Equivalent: ENGINE/ENGINE SERVICE/RESTORE USER DEFAULT
Apply button	Applies the configuration settings for this window.
Clear button	Resets all configuration settings for this window to their user defaults.
Logout button	Logs out of Administrator Mode and returns to User Mode.

## Configuration (shown above)

#### **TCP/IP Configuration**

The **Network/Configuration/TCP/IP Configuration** window allows you to configure the following items. For more information on these TCP/IP, see chapter 3, "Network Printing in a Windows Environment."

Item	Description
Auto IP	Specifies the automatic assigning method for the printer IP address.
	Choices: DHCP, BOOTP, None Default: DHCP
	Configuration Menu Equivalent: NETWORK/DHCP BOOTP

ltem	Description
IP Address*	Sets the printer's IP address.
	Range: 0–255 for each xxx triplet Default: 192.168.1.2
	If the IP address is outside the range, the following message displays when you choose the <b>Apply</b> button: "Please enter a correct address." Click <b>OK</b> button, and then type an appropriate number.
	Configuration Menu Equivalent: NETWORK/IP ADDRESS
Subnet Mask*	Sets the printer's subnet mask address.
	Range:0–255 for each xxx tripletDefault:255.255.255.0
	If the subnet mask address is outside the range, the following message displays when you choose the <b>Apply</b> button: "Please enter a correct address." Click <b>OK</b> button, and then type an appropriate number.
	Configuration Menu Equivalent: NETWORK/SUBNET MASK
Default Gateway*	If a router is used on the network, sets the router's address.
	Range: 0–255 for each xxx triplet Default: 192.168.1.1
	If the router address is outside the range, the following message displays when you choose the <b>Apply</b> button: "Please enter a correct address." Click <b>OK</b> button, and then type an appropriate number.
	Configuration Menu Equivalent: NETWORK/GATEWAY
RAW Port	Identifies the number of the printer's RAW port.
Number	Choices: Non-configurable Default: 9100
Apply button	Applies the configuration settings for this window.

Item	Description	
Clear button	Resets all configuration settings for this window to their user defaults.	
Log out button	Logs out of Administrator Mode and returns to User Mode.	
the Auto IP list. A	can be entered only if "DHCP" or "BOOTP" is selected from lways enter these addresses without leading zeros. For I.010.001 should be entered as 131.11.10.1.	

#### **Windows Configuration**

Done Done			🔮 Internet

The **Network/Configuration/Windows Configuration** window allows you to configure the following items. In order to apply the settings, the printer must be turned off, then on again after the setting is specified.

Any unacceptable value entered in the text field prompts an error message: "Invalid name setting. Please enter a correct name." Click **OK** button and then type an appropriate value.

ltem	Description
WINS/NetBIOS Resolution	If the check box is selected, name resolution using WINS and NetBios is performed. Set NetBios Name, Domain/Workgroup, and WINS.
	In addition, "–" cannot be used at the beginning of the name.
NetBios Name	Enter using up to 15 alphanumeric characters. Spaces are not allowed.
Domain/Work-	Enter the printer's domain name or workgroup name.
group	Enter using up to 15 alphanumeric characters. Spaces are not allowed.
SMB Printer Name	This name is static.

Item	Description
Use DHCP for WINS	If the check box is selected, the WINS Server address setting is received from the DHCP Server. In this case, the Primary WINS and Secondary WINS settings are void.
Primary WINS*	Set the WINS Server address.
Secondary WINS*	
Apply button	Applies the configuration settings for this window.
Clear button	Resets all configuration settings for this window to their user defaults.
Logout button	Logs out of Administrator Mode and returns to User Mode.
	ese addresses without leading zeros. For example, should be entered as 131.11.10.1.

#### **Rendezvous Configuration**

<ul> <li>Done</li> </ul>			Internet

The **Network/Configuration/Rendezvous Configuration** window allows you to configure the following items.

Item	Description			
Rendezvous Ser- vice Discovery	If this check box is selected, a printer using Rendezvous can be searched for.			
Printer Name	Type in the name of the printer.Range:Up to 63 charactersDefault:KONICA MINOLTA magicolor 5430 DL			
Host Name	Specify the host name. When accessing a printer with the Web browser from an operating system (Mac OS X) that supports Rendezvous, the host name specified here is used, instead of the IP address. In that case, add ".local." to the host name that is specified. (Example) http:// <host_name>.local./</host_name>			
	Range:       Up to 63 characters (Spaces cannot be used.)         Default:       MC5430DLXXXXXX ("XXXXXX" indicates the last six digits of the MAC address.)			

Item	Description
Apply button	Applies the configuration settings for this window.
Clear button	Resets all configuration settings for this window to their user defaults.
